

Hi Tech Manufacturing

Good Morning David:

I would like to take this opportunity to thank you and your staff for the extremely professional assistance you rendered Hi Tech Manufacturing during our most recent anodizing program. After a search conducted on both coasts for a metal finishing company capable of meeting our customer's stringent requirements, Dav-Tech Plating Inc. was introduced to us by one of our nuclear suppliers.

Thanks to the efforts of Dav-Tech's Technical, Quality and Production staffs, Hi Tech Manufacturing was able to supply our customer a finished product, which we had been told could not be achieved with present Anodizing Technology. Dav-Tech's involvement enabled us to meet our customer's requirements.

Dav-Tech Plating should be commended on a job well done for participating in this type of program geared toward servicing one of the most demanding industries today, spent nuclear fuel storage construction. Dav-Tech Plating was able to process 15,000 feet of product with virtually no rejects.

Again, thank you for your efforts and we look forward to working with Dav-Tech Plating, Inc. in the future.

Sincerely,

Don W. Olson
President
Hi Tech Manufacturing
